### Fiscal Estimate Narratives ETF 5/9/2005

LRB Number	05-2359/1	Introduction Number	AB-352	Estimate Type	Original	
Subject		988.			-	
Coverage of c	ertain individuals	under the state employee	health care	coverage plan		

#### **Assumptions Used in Arriving at Fiscal Estimate**

AB-352 allows individuals receiving a pension from the Pension Guaranty Benefit Corporation or is eligible for a tax credit under the federal Trade Adjustment Assistance Reform Act to enroll for coverage under the state employee group health insurance program.

Assumptions used in the preparation of this estimate as as follows:

- \* The total number of eligible state residents is estimated to be 4,000.
- \* All eligible residents are between the ages of 55 65. Since the bill requires that the participant not have other health insurance, it was assumed that residents 65 and older are covered under Medicare and therefore, would not be able to enroll under the state employee health program.
- \* No underwriting would be required since the bill prohibits any limitations on pre-existing conditions.
- \* The expected claims experience of the eligible group is approximately 70% greater than the average claims cost for the current state group health plan population due to age. An additional claims experience factor of 20% (over the current population's experience) was assumed due to adverse selection.

Adverse selection occurs when participants can voluntarily opt in and/or out of the plan. This tends to encourage participants with a higher than average claims experience to join the plan and encourages individuals with a lower than average claims experience to opt out of the plan.

- \* A 10% sales agent commission load is assumed since the coverage most likely would be obtained via insurance brokers.
- \* Eligible residents would pay the entire cost of the premium.

According to the Group Insurance Board's consulting actuary, the cost associated with this bill is dependent on the number of eligible residents who would enroll. Assuming that enrollment would be between 500 and 2,000 individuals (12.5% to 50% of the eligible population), the actuary estimates that the additional cost to the state program would be between \$3.2 million and \$12.8 million annually. This additional cost represents the additional cost to cover the current population of state employees (it does not include the cost of the premiums for the non-state employees enrolling in the plan).

Allowing non-government employees to enroll in the plan could make the plan subject to provisions of the Employment Retirement Income Security Act (ERISA). Compliance costs associated with these provisions are not included in this estimate.

#### Long-Range Fiscal Implications

The effects of adverse selection are expected to increase costs over time.
